

your body's reversal of aging agents.

Aging is the result of decay and degeneration in our bodies. If we can slow or even reverse decay and degeneration by providing the proper nutrients, we should be able to slow and even reverse the effects of aging.

The AGE Pill provides specialized super nutrients to the stem cells, which enhance and allow the natural processes of the body to operate more efficiently... to do what you want to do, so you can be what you want to be. Now you can be revitalized, and feel as youthful as if you were 20 again.

The A.G.E. Pill massively supports your naturally functioning biology:

- Removal of the Advanced Glycation End Products.*
- Removal of Lipofuscin.*
- Helps stem cells to operate at their optimum potential.*
- Increasing ATP-providing biological hydrogen to help amplify cellular electrical energy.*
- Helps boost your energy levels back to a more youthful self.*

* These statements have not been evaluated by the Food and Drug Administration. These products are not intended to diagnose, treat, cure or prevent any disease.

Aging Is NOT A Disease!*

Aging is a condition due to decay and degeneration, therefore reversible.

Try ALL of Sisel's High-Performance Products!

We hold ourselves to the highest possible standard of ingredient integrity. We will always give you the safest, most-effective, non-toxic ingredients to keep your life and family safe, healthy, and happy.

The A.G.E. Pill

Look more youthful and feel as if you were in your 20's again.

sisel

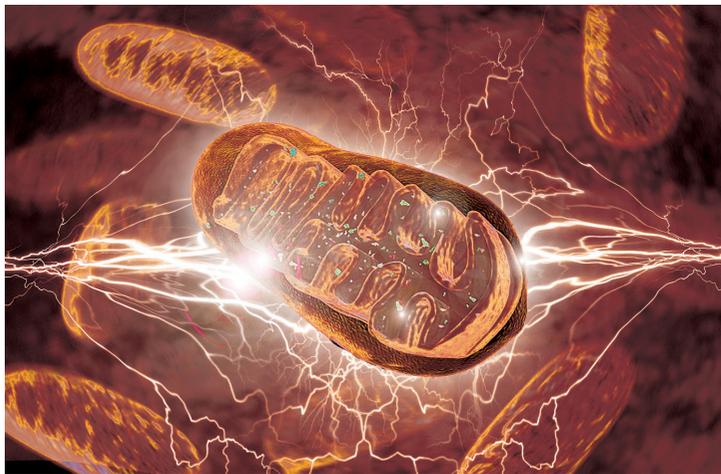

The AGE Pill's supernutrients accelerate youthful energy and vitality.

When we were very young, our bodies grew quickly, with an abundance of highly active stem cells. Stem cells are the master cells in our bodies that are able to transform into any type of cell that we need. As we grew, our stem cells divided and multiplied into the trillions of cells that make up an adult body, and replaced the cells in our body faster than they wore out and were discarded.

As children, we also had all of the energy that we needed to go all day long. This energy is derived from metabolizing glucose sugars to create electrical energy. As our bodies break glucose down through oxidation to release the energy that powers the cells in our body, a plaque like residue was left over. This residue—known as A.G.E. (Advanced Glycation End-products)—accumulates over time, depositing an inhibiting coating over proteins, reducing optimal stem cell performance.

As the stem cells rebuild new cells and maintain themselves, Lipofuscin is formed. Lipofuscin is metabolic waste, a cellular sludge that builds up over our lifetime that clutters cells and greatly inhibits biological functions. It is difficult for our cells to produce the energy they need when this thick sludge inhibits flow and function.

But what if we got some help to clean up the mess and dump much of the accumulated trash left behind by glycation and lipofuscin? Then the stem cells in our bodies should be free to function again at a high level. Scientists now theorize it may well allow our bodies to again produce energy at the same levels as when we were in our prime, much like if we were in our 20's again.

Help combat the cellular-level functional issues that occur as a result of aging, by increasing ATP—providing biological hydrogen to help amplify cellular electrical energy, and cleaning up cellular waste—allowing the cell to work at potentially optimal levels of youth.

This is what sets the AGE Pill apart from other anti-aging products, into the realm of potential youthful regeneration. The AGE Pill provides three classes of advanced, specialized super-nutrients to the stem cells to delivering **intense support for:**

- 1.** Removing glycation plaque buildups that inhibit intercellular proteins.
- 2.** Reduction/removal of toxins and cellular sludge resulting from biological activity creating lipofuscin.
- 3.** Significantly increasing ATP-providing Biological Hydrogen to greatly amplify cellular electrical energy. Theoretically, this process could increase electrical energy within the stem cells three or four fold, to where you may “feel like you were 20 again!”

Adenosine Triphosphate (ATP) and biological hydrogen are believed to be key in supporting the releases of vast stores of electrical energy to your body. Your enhanced, elevated energy could help your cells to rebuild, rejuvenate and work at more optimum levels, potentially alleviating the ravages to our bodies that occur over our lifetime.

Our powerful and unique synergistic blend, potentially maximizes The A.G.E. Pill's nutritional content, providing intense support for removing glycation buildup, reducing toxins and **increasing ATP**, helping you look and feel like you were in your 20's again.

**Be Younger,
More Energetic,
And Youthful.
Be You Again!**

The Science behind the A.G.E. Pill

1. Remove Glycation End Products

Our bodies use oxidation to break down glucose and release the energy that powers the cells in our body. During this process, a plaque like residue known as glycation end products is left over. This residue accumulates over time, depositing an inhibiting, plaque-like coating over proteins, masking receptor sites that are needed for the proteins to perform properly. In order to restore the proteins to working at their optimal levels, you need to remove as much stem cell plaque as possible.

Individually, Blueberry extract, Alpha Lipoic Acid (anti-oxidants), and Acetyl L-Carnitine all contribute to significant lowering of the amount of glycation end products. Combined they produce a synergistic effect, including the normalizing of biological markers enhancing the breakdown and removal of accumulated stem cell plaque.

2. Lipofuscin Reduction

Lipofuscin is the toxic waste and sludge that builds up when our cellular “garbage-disposal system” (autophagy) breaks down. Thick goey Lipofuscin inhibits, retards and damages the flow, permeability of fluids and biological within the stem cells. Eventually, with the decrease in autophagy and related increase in lipofuscin, there is increased oxidative stress, decreased energy production, and ultimately, cell death. Lipofuscin accumulation has an inverse relationship with lifespan and is a well-documented hallmark of aging.

Acetyl L-Carnitine supports the enzyme activity that stem cells produce to breakdown and remove Lipofuscin. Alpha Lipoic Acid helps to neutralize toxins and chelate heavy metals, while enhancing Glutathione.

3. Youthful Energy Regeneration

Mitochondria are the “powerplants” of the cell, generating chemical energy that your cells need to function properly. This energy is derived from the oxidation and reduction of Adenosine Triphosphate (ATP) through a process called the Krebs's Cycle. Like any powerplant, the mitochondria need fuel in order to run; the more specific types of fuel you provide, the more energy they are able to create.

The A.G.E. Pill is loaded with the building blocks for supporting the production and/or addition of natural cellular energy: Nicotinamide NAM+ Ribose, Nicotinic Acid, Nicotinamide Riboside NR, NMN, NADH+ Niacin (Krebs Cycle for ATP-Biological Hydrogen-Electrical Energy production) Tryptophan, Betaine (thermogenesis), Alpha Lipoic Acid (Fat burning Energy for Stem Cells, tissue and muscle), Ascorbic Acid, Aspartic Acid.
